
Stock Price Direction Prediction

Lukáš Tomáš Petrželka

Task

- Train a model capable of predicting the direction of a given stock price next day
 - Use Recurrent Neural Network (LSTM chosen)
-

Dataset

- daily prices
- added 7 technical indicators

	Open	High	Low	Close	Volume
0	0.054594	0.062623	0.054594	0.059946	1031788800
1	0.059946	0.063158	0.059946	0.062087	308160000
2	0.062087	0.063694	0.062087	0.063158	133171200
3	0.063158	0.063694	0.061017	0.061552	67766400
4	0.061552	0.062087	0.059947	0.060482	47894400

Neural Network Architecture

LSTM layer -> Dropout(0.2) -> LSTM layer -> Dropout(0.2) -> fully connected linear layer(128 neurons)

Results

- OHLC dataset without technical indicators: nn was unable to learn
